Abstract (en)

[origin: WO2016020549A1] The invention relates to a handle assembly (10) for a door (60), in particular for a motor vehicle door (71), having a pivotable outer handle (11) that can be arranged on the outside of the door (60), a first (12) and second bearing arm (13), which are arranged at opposite ends of the outer handle (11), wherein both bearing arms (12, 13) are configured to engage through recesses (62) in an outer skin (61) of the door (60) into the inside (63) of the door (60), wherein the outer handle (11) can be pivoted from a closed position (43) into an open position (42) during an opening movement (40), and from an open position (42) into the closed position (43) during a closing movement (41), wherein the movement directions (44) of the outer handle (11) further lie in one plane of movement (51) during the opening movement (40) and the closing movement (41) and wherein the recesses (62) are arranged at least essentially in one door plane (50) which is perpendicular to the plane of movement (51) and defines an outer half-space (52) directed toward the outside (65) of the door (60), in which outer half-space (52) the outer handle (11) is located, and an inner half-space (53) directed toward the inside (64) of the door (60). The invention further relates to a door (60), in particular a motor vehicle door (71) having a handle assembly (10), and to a motor vehicle (70) having a motor vehicle door (71).
