Abstract (en)  
[origin: WO2016020584A1] The invention relates to a damper, especially for the clutch of a car, comprising: an input element and an output element that can move in relation to the other about a rotational axis (X); and damping means for transmitting torque and damping the rotational acyclisms between the input and output elements; said damper being characterised in that the damping means comprise an elastic plate (122) and said elastic plate consists of a stack of strips, the thickness of each strip (123) being less than 15 mm, preferably less than 10 mm.
