Abstract (en)
[origin: WO2016020379A1] The invention relates to a container (1) with lateral walls (110, 120), a base (130), a cover (140), a front wall (150), and a rear wall (160). Each wall has an inner face (112, 122, 132, 142), an outer face (111, 121, 131, 141), and an insulating layer (170) lying between the inner and outer face. The container (1) further has a cooling device (300) which is designed to provide a heat transfer medium with a specifiable temperature and/or humidity, and the container has a low-pressure pump device (310) which is designed to circulate the heat transfer medium with a first pressure in the interior (101) of the container (1). The container (1) further has a high-pressure pump device (320) which is designed to circulate the heat transfer medium with a second pressure in the interior (101) of the container (1), said second pressure being higher than the first pressure. The invention further relates to a method for transporting goods using such a container and to a generator device (200) for assembling on a container.
