Abstract (en)

[origin: CN106862463A] The invention provides a self-piercing rivet setting device and rivet setting method for self-piercing with an oscillation supporting a stamp force. The rivet setting method comprises the following components: a vibration generating device (21) for producing vibration (S) which supports a punch force (F) for setting a punch rivet (5) into at least one component (6,7); a die (10) which is used for bearing the punch force (F) and bearing the vibration which supports the punch force (F); and a test device (15) for checking mechanical quality of rivet connection produced by the punch rivet (5) with test vibration (P) produced by vibration generation equipment (21).
