Abstract (en)
[origin: TW201727008A] The invention relates to a track section comprising spacers (4, 13) which interconnect track components (1, 6), wherein at least a first track component has track webs (23, 28). In order to make sure that with a simple construction, high load-withstanding secure connection is given to guarantee a constant distance between the track components, it is proposed that from the track webs (23, 28) of the first track components (1, 6), tubular members (2, 5), via a material bonding means, connect the spacers (4, 13).
