Abstract (en)
[origin: CN106996716A] The invention relates to a device for attaching an accessory to a weapon. The device comprises a base body, on the first side of which at least one first clamping jaw is fixed and on the opposite second side of which at least one second clamping jaw characterized in that the movable clamping jaw can be clamped against the fixed clamping jaw by clamping a fastening rail arranged on the weapon. In this case, an actuating device arranged in or on the base body on the side of the fixed clamping jaw is provided, which passes through the base body and is connected to the movable clamping jaw, and clamping force is generated through a spring device or a magnetic device. The spring device or magnetic device is arranged between the actuating device and the base and/or between the movable clamping jaw and the base. By actuation of the actuating device, the movable clamping jaw can be brought into its open position from its closed position.
