Abstract (en)

[origin: WO2016025481A1] A package having a plurality of individually sealed compartments is described. Each compartment contains a food product in an interior defined between a back panel sealed to a front panel about the interior. The front panel includes a flap detachable from adjacent portions of the front panel along a flap line of weakness to form an access opening configured to permit removal of the food product from the interior of the compartment.
