Abstract (en)
[origin: WO2016026550A1] The invention relates to a conveyor device for conveying transportation structures (16), particularly transportation skids (18) in the automobile industry, comprising a conveyor path that is formed from a plurality of path units (10) arranged one behind the other, each of said path units (10) comprising two parallel longitudinal profiled sections (26, 28). A drive system for said transportation structures (16) is provided that comprises at least one drive device which, when said conveyor device (12) is in operation, is arranged on at least one of said longitudinal profiled sections (26, 28). The drive system comprises at least one drive module (70) which can be detachably secured to the longitudinal profiled section (26) by means of a drive-securing device (82).
