Abstract (en)

[origin: WO2016023664A1] The invention relates to a winding device for winding a material to be wound (10), comprising a winding mandrel (12) which is provided for the purpose of supporting a carrier (14, 15) for the material to be wound during a winding process, comprising a transport unit (16) on which at least one part of the winding mandrel (12) is arranged, and comprising a positioning unit (18) which is provided for the purpose of changing a spatial location of the transport unit (16). It is proposed that the positioning unit (18) is provided for the purpose of adjusting a spatial end position of the transport unit (16) to at least substantially any position.
