Abstract (en)

[origin: WO2016023759A1] The invention relates to a work machine (10) with a chassis, with a mast block (14) which is mounted on the chassis and has a rotary head (12) which can be rotated about a vertical axis of rotation, and with a mast (16) which has at least two mast arms (20, 22, 24, 26), wherein each of the mast arms (20, 22, 24), with the exception of a last mast arm (26) which has a free end (30), is pivotably connected, starting from a first mast arm (20), to the respectively following mast arm (22, 24, 26) by means of an articulation (28), and wherein the first mast arm (20) is mounted on the rotary head (12) so as to be pivotable about a horizontal pivot axis. According to the invention, at least one chassis-mounted supporting device (44) is provided which has a supporting surface (46) on which a component of the articulation (28) or a component of one of the articulations (28) is supported.
