Abstract (en)
[origin: EP3182435A1] The invention relates to an electrical switch apparatus comprising at least one lighting arrangement (100) and main apparatus body having at least three connection elements. Two adjoining connection (200) elements of said connection elements form a socket. The lighting arrangement (100) comprises a printed circuit board, at least a light source arranged on said printed circuit board and at least two connectors, namely a first connector and a second connector. The first connector and the second connector form a plug. The plug is connected to said socket to electrically connect said adjoining connection elements forming said socket to said connectors forming said plug. The lighting arrangement (100) is configured to enable said light source to perform a first function when said socket is formed by a first couple of adjoining connection elements and a second function when said socket is formed by a second couple of adjoining connection elements which is distinct from said first couple of adjoining connection elements.
