Abstract (en)

[origin: WO2016026657A2] The invention relates to a stacking device for flat objects standing upright, in which the objects are stacked to form a stack which increases in the direction of stacking, comprising at least one stacking point on which the objects are respectively added to the stack. According to the invention, the stacking device comprises at least one stacking receiving drive by means of which at least one stack holder receiving the stack can be moved in the direction of stacking with respect to the stacking station.
