Abstract (en)
[origin: KR20160023528A] According to an idea of the present invention, a refrigerator comprises: a body; a storage chamber formed inside the body; a door opening and closing the storage chamber; a common water tank supplied with common water from an external water supply source to be stored; a mixing tank supplied with common water from the common water tank to be mixed with carbon dioxide to produce carbonated water to be stored; a dispenser supplied with common water from the common water tank to be provided to the outside, and supplied with carbonated water from the mixing tank to be provided to the outside; and an ice making machine supplied with common water from an external water supply source or the common water tank to produce common ice, and supplied with carbonated water from the mixing tank to produce carbonated ice. Therefore, common water, carbonated water, common ice, and carbonated ice can be provided through the dispenser.
