Abstract (en)

[origin: WO2016026601A1] The invention relates to a control terminal (20) for processing systems having a communication apparatus (28) configured to exchange information with a communication partner via the processing system, a screen (22) configured to display information about the processing system, a position sensor (26) configured to detect output information concerning an alignment of the control terminal (20) and a processor (24), configured to control the communication apparatus (28), the screen (22) and the position sensor (26). The functionality of the control terminal is expanded in that the processor (24) adjusts a function of the control terminal (20) in dependence on alignment information of the position sensor (26).
