Abstract (en)

[origin: WO2016026813A1] The invention relates to a plug connector part to be connected to a mating plug connector part, comprising a plurality of electrical contact elements for the purpose of conducting an electrical current and establishing electrical contact with contact elements of a mating plug connector part. A plurality of temperature sensors (44B-44E) are provided each of which is arranged on an associated contact element of said plurality (42A-42G) in order to detect a change in temperature at the associated contact element (42A-42G), said temperature sensors (44B-44E) being connected to a shared sensor cable (45). A plug connector part is thus provided which allows, simply and cost-effectively, temperature monitoring with rapid response characteristics and a simple structure.
