Abstract (en)  
[origin: WO2017109036A1] The invention relates to a printing apparatus (10) for printing print objects (1), comprising a machine base body (20) which has a width side (22) and a longitudinal side (21) and is designed to accommodate at least one print object, a guide device (40) which is arranged above the machine base body and extends over the print object over the width of the machine base body, and a printing device which is designed to print the print object and is moveably arranged on the guide device over the width of the machine base body. The printing device comprises at least one first print head unit (41) and a second print head unit (42), which can be independently moved relative to each other over the width of the machine base body on the guide device, wherein each print head unit has at least one print head which is designed to print the print object with at least one printing ink. In addition, the invention relates to a print method for printing textile surfaces, in particular with the apparatus, according to the invention, in which at least one print object is held on a machine base body and a printing device is delivered to the at least one print object. The first print head unit and at least one second print head unit of the printing device are independently moved over the width of the holding base body relative to each other along a guide device and print the at least one print object with a printed image.
