Abstract (en)

[origin: CN206361921U] The utility model discloses a give equipment (1) that fluid flow (3) by air and/or gas formation adjusted the temperature. This equipment (1) includes: at least one machine (13) to produce hot gas volume flow (17), passageway (5), this passageway provides flow path (7) for fluid flow (3) by air and/or gas formation, and conveyor (6) of location in flow path (7) at least partly, this conveyor is in to flow with at least one machine (13) sum channel (5) in order to introduce passageway (5) with hot gas volume flow (17) and is connected. Conveyor (6) are in order to introduce hot gas volume flow (17) passageway (5) and to have a plurality of holes (9) of location in the region of flow path (7), and two at least hole (9) in a plurality of holes (9) are in in the vertical not co -altitude level.
