Abstract (en)

The present invention refers to a simplified assembly trellis-like modular element for towers of tower cranes and to a tower comprising at least one of such elements, where the simplified assembly trellis-like modular element (30) for towers of tower cranes comprises a plurality of posts (31) for supporting a trellis structure, each of the posts (31) extending lengthwise along a longitudinal axis (A) and having a first end (32) and a second end (33), the simplified assembly trellis-like modular element (30) being characterized in that each of the posts (31), at the first end (32), comprises at least a connection assembly (40) arranged to at least partially house at least one screw (34) of a bolt (34, 35) adapted to connect the simplified assembly trellis-like modular element (30) to another trellis-like modular element (30) as well as to guide and support the at least one screw (34) during assembly.
