Abstract (en)

[origin: CN106894123A] The invention relates to a spindle arrangement for a spinning or twisting machine, in particular a ring spinning machine (1), comprising a plurality of spindles (11, 31, 32, 33, 31', 32' 33', 34, 35, 36). Said spindle arrangement comprises a spindle bank (14) with bores (15) for fastening the spindles (11, 31, 32, 33, 31', 32', 33', 34, 35, (31, 31') and the second spindle (32, 32') are arranged between the first spindle (31, 31') and the second spindle (31, 31') (32, 32') and presses the tangential belts (6) against the whorls (13) of the first spindle (31, 31') and the second spindle (32, 32') Wherein the center points of the bores of the first spindle and the second spindle lie on a spindle straight line. According to the invention, the center of the bore (15) of the third spindle (33, 33') is at a distance from the spindle straight line (40), the center point of the bore (15) of the third spindle (33, 33') and the first pressing roller (41, 41') are located on the same side of the spindle straight line (40).
