Abstract (en)

[origin: WO2016032350A1] The thermal insulating façade construction component according to the invention comprises an element (1) made of thermal insulating material, wherein the internal vertical wall, located inside the building, is at least partially coated with a layer of binder material (4) bonded with the element. The element (1) has at least one horizontal hole (2), preferably two horizontal holes, and a vertical pass-through gap (3) oriented towards the upper and lower wall and a closed gap directed towards the side walls, whereby the pass-through holes (2) and the gap (3) are filled with binder material. The horizontal hole (2) intersects the vertical gap (3).
