Abstract (en)

[origin: WO2016030241A1] The invention relates to a household device (1), in particular a refrigeration device (1a), comprising an electronic control device (14) designed to control at least one function of the household device (1), an input device (11) connected to the control device (14), which has at least one input means (12), and which is designed to supply an assigned control signal to the control device (14), based on a manual actuation of the at least one input means (12), and an input means locking device (15) which, in its locked state, is designed to prevent a controlling of the function of the household device (1), despite the at least one input means (12) being actuated, and in its unlocked state, same is designed to permit a controlling of the function of the household device (1) when the at least one input means (12) is being actuated, wherein the input means locking device (15) is designed and/or intended for shifting the input means locking device (15) into the locked state, after the at least one input means (12) has not been actuated over a predefined time period.
