Abstract (en)

[origin: WO2016030115A1] The invention relates to a control device (20) for a cooling device (9), in particular for a motor vehicle, comprising a first interface (21) for activating the cooling device (9) for test operation, a second interface (22) for sensing at least one operating parameter of the cooling device during the test operation, a third interface (23) for sensing at least one vehicle parameter, a fourth interface (29) for outputting an error indication with regard to the cooling device (9), and a computing unit (25), which initiates test operation of the cooling device in dependence on the at least one vehicle parameter and which outputs the error indication during the test operation in dependence on the at least one operating parameter of the cooling device (9).
