Abstract (en)

[origin: WO2016030620A1] The invention relates to a recommendation system for selecting a spectacle frame, including a database, said data including a digital model of each frame, and a computer apparatus connected to the database and including a camera device, a display screen and an acquisition interface, said computer apparatus being designed for inviting the user to answer a questionnaire, said computer apparatus including an image analysis tool designed for determining, from images of the user, anatomical features of the user, said computer apparatus allowing the user to virtually try on each frame by implementing an augmented reality process, said computer apparatus including processing means capable of producing a selection of frames based on the responses of the user to said questionnaire and said anatomical features. The invention is useful in the field of spectacles.
