Abstract (en)

[origin: EP3187068A1] The present invention relates to a decorative plate formed on the lid of a compact case and a method for producing the same and, more specifically, to a decorative plate formed on the lid of a compact case and a method for producing the same, the decorative plate being configured to: prevent a printed phrase or picture from peeling or being erased, by forming a printing layer under a transparent plate so that the printing layer is not exposed to the outside, thus require no separate transparent coating, and thereby reduce production costs and allow long-term use; allow the printing layer to stand out more vividly by forming a pigment layer under the printing layer; and prevent an adhesive layer from being seen through the transparent plate when the decorative plate is bonded to the top of the lid.
