Abstract (en)  
A mailer made of cardboard or equivalent material is provided with at least one compartment, closed by a removable leaf, for containing and hiding an object with a substantially two-dimensional development, such as a brochure, a credit card, a membership card, or a ticket, which can be taken out merely by tearing said leaf along a pre-set tear line, which enables also complete detachment thereof from the cardboard on which it is provided, rendering, on the one hand, evident any attempt at theft or tampering and, on the other, also enabling re-use of said part of the mailer for further advertising and commercial messages. As further communication tool, within the mailer, the compartment can be closed by a wall on which are present pre-dinked shapes - graphically representing objects or tools - which are provided by perforated lines along the corresponding contours that facilitate detachment thereof and their independent use.
