Abstract (en)
[origin: EP3187656A1] Invention relates to method of producing pulp bales (1-6) by forming (12) a pulp web (W), drying the formed pulp web (14,16), slitting and cutting (18) the pulp web into sheets and forming number of parallel bales (1-6) of pulp sheets. Basis weight of the web is measured (28) on-line prior to slitting the web, a calculated weight of the bale is determined, and each one of the formed bales is weighed in a scale (30) and the calculated weight is corrected by the scale weighted weight of the bale, thus determining a corrected weight of the bale, and that the corrected weight value of the bale is used for controlling (26) the process of producing pulp bales. Invention relates also to arrangement for controlling bale weight profile in a pulp drying machine.
