Abstract (en)
[origin: EP3187663A1] A parasol (1) comprising a series of spokes (2), between which a piece of fabric (3), designed to project shade extends, these spokes being linked to a mechanism (4) that makes it possible to vary the arrangement of the spokes, such that the parasol adopts at least one folded position (A) and one operative unfolded position (B1, B2, B3, B4, B5). The mechanism comprises a shaft (5) and a plurality of rings (6), which overlap and are mounted rotationally around said shaft, at least two spokes being joined to different rings; and also the mechanism comprises a stop device (7), which may be operated manually and is capable of blocking relative movement between rings.
