Abstract (en)

[origin: WO2016034554A1] The invention relates to an application unit for an application device, in particular an application gun for applying gel-like and/or paste-like compositions, comprising an output unit (10) for dispensing the compositions, a connection element (12), in particular a cover, for connecting the output unit (10) to the main body of the application device, and a closure element (11), wherein the closure element (11) is rotatable around an axis of rotation with respect to the connection element (12) and the output unit (10) for fastening the output unit (10) on the connection element (12) and for detaching the output unit (10) from the connection element (12), wherein a lifting unit (16, 19, 25, 26) is formed and arranged in such a way that the output unit (10) is lifted by a rotation of the closure element (11).
