Abstract (en)

[origin: WO2016034579A1] The invention relates to a container (1) comprising: an upper wall (2), a lower wall (4) and a side wall (6) defining an inner space (8), a single opening (12) extending along a main axis (A), a cap (18) comprising a flow duct (20) provided with an outlet (22) extending along an axis (S) substantially perpendicular to the main axis (A), and a pipe (44) comprising a first end (46) in fluid communication with the outlet (22) and a second end (48) intended for extending above the level of the liquid in the container, the pipe being rotatably secured with the cap and extending essentially along a tilted axis (T) forming an angle (α) of 25° to 75° with the main axis (A) and having a length no less than half the length of the container.
