Abstract (en)
[origin: CN106954890A] The invention relates to a method for producing a multisegment filter tip for tobacco industry. Firstly, groups (47,47') of filter tip segments (40,41,40',41',42,43) are arranged, and the groups (47,47') of filter tip segments (40,41,40',41',42,43) are transmitted on a direction vertical to the longitudinal axis of the groups (47,47'). In addition, the invention relates to a corresponding multisegment filter tip production apparatus (10). The method is characterized in that the groups (47,47') of filter tip segments (40,41,40',41',42,43) have a first end face (44) and a second end face (45). The filter tip segment (40) of the groups (47,47') of filter tip segments (40,41,40',41',42,43), which is provided with the first end face (44), is cut into a first part (42) and a second part (43), and the first part (42) and the second part (43) are recombined with the side of the groups (47,47') of filter tip segments (40,41,40',41',42,43) in an external manner, the side being provided with the second end face (45).
