Abstract (en)

A container device (100) includes outer and inner containers (4, 5). The outer container (4) includes an outer container body (41) defining an axis (L) and an accommodation space (414) extending along the axis (L), and a metal tube layer (42) disposed in the accommodation space (414) and extending along and surrounding the axis (L). The outer container body (41) is made of a polymeric material. The metal tube layer (42) is made of a ferromagnetic material. The inner container (5) is disposed in the accommodation space (414) such that the metal tube layer (42) is disposed between the inner and outer containers (5, 4).
