Abstract (en)
A cutting tool (110) for forming a hole by means of orbital drilling is provided. The cutting tool includes a body (112) having a first portion (118), which has a first diameter and a first radial rake angle (124: Fig. 2), and a second portion (120) adjacent the first portion (118), the second portion (120) having a second diameter and a second radial rake angle (126: Fig. 3). The second diameter is different from the first diameter and the second radial rake angle (128) is different from than the first radial rake angle (124). In preferred embodiments the second diameter is larger than the first diameter and the first radial rake angle (124) is positive, whilst the second radial rake angle (128) is negative, such that residual stresses may be imparted to the wall of the orbitally drilled hole. A system (110: Fig. 7) for, and a method (300: Fig. 9) of, orbitally drilling a hole are also provided, wherein the system includes the cutting tool (110).
