Abstract (en)  
A method for controlling an elevator system (10) comprises: receiving floor calls, a floor call indicating that a person intends to enter and/or leave an elevator car (12) at a target floor (22); receiving floor specific fire indication signals from a plurality of fire detectors (44) adapted for detecting environmental conditions indicating a fire in different floors (22); and rejecting a floor call to a target floor (22), when fire has been detected for the target floor (22) based on the floor specific fire indication signals.
