Abstract (en)
A sensor assembly includes a frame (102) defining a sensor axis having opposing endplates (110) with axially extending supports (108). The opposing endplates are connected by a pair of axially extending side beams (112). A suspended mass (104) is within an interior of the frame suspended from the supports of the frame. A plurality of piezoelectric material layers (114) are operatively connected to sides of respective spacers opposite the frame to damp vibrations of the suspended mass.
