Abstract (en)

[origin: WO2016037202A1] The invention relates to a device that can be dismantled and carried, for supporting and retaining balancing straps (1), comprising a strap support (2) and a strap-retaining device (4) that is arranged in the longitudinal direction (1') of the balancing strap (1), which strap-retaining device is connected to the balancing strap (1) by a connecting element (5), wherein the strap-retaining device (4) comprises a ground body (15) having at least three bores (16) for accommodating retaining elements (17), wherein the ground body (15) has at least one perpendicular bore having a right bore angle to the ground body longitudinal axis (18) and at least one slanted bore having a projected bore angle of 40-70° to the ground body longitudinal axis (18) and at least one additional perpendicular bore and/or slanted bore, wherein at least one bore pair crossed in a pair is formed in each case by two perpendicular bores and/or two slanted bores, which at least one bore pair has a projected bore angle of 40-70° to the ground body transverse axis (19) on the left and the right side of the ground body (15), and all possible individual bores that do not form a bore pair have a right bore angle to the ground body transverse axis (19).
