Abstract (en)
[origin: WO2016037600A1] The invention relates to a foot-operated door opener, comprising a foot-operated actuator mechanism (1), which is arranged in the lower region on a door during use, wherein the foot-operated actuator mechanism (1) interacts with a door-opening mechanism (2) during use in order to open the door, wherein the foot-operated actuator mechanism (1) comprises at least one foot surface element (3), which can be moved between a starting position and an end position, wherein the door-opening mechanism (2) actuates mechanically independently of the foot surface element (3) during use when the foot surface element (3) is released and the foot surface element (3) is at least partially pulled back in the direction of the starting position of the foot surface element.
