Abstract (en)

[origin: EP3192933A1] The invention relates to an arrangement for renovating the outer shell of a building, including thermal insulation elements (2) to be fastened to the exterior wall (1) of the building. The thermal insulation elements (2) are fastened at a distance forming the ventilation gap (7) from the outermost surface of the exterior wall. The ventilation gap (7) between the inside surface (3) of the thermal insulation element (2) and the exterior wall (1) is arranged to open into the outside air via at least one ventilation opening (6) in the lower edge and upper edge of the thermal insulation element, allowing moisture to escape from the exterior wall (1) via the ventilation gap (7) and the ventilation openings (6). The ventilation openings (6) are arranged to be closed when the moisture in the exterior wall reaches the desired moisture content.
