Abstract (en)
A system (1) for lifting a window for installation in a roof structure such as to lift the window to a desired place on or in said roof structure, the system comprising a window (2) for installation in a roof structure and comprising a frame (10) with a top member (11), a bottom member (12) and two side members (13, 14), the frame comprising an upper wall (15), a lower wall (16) and an outer side wall (17) formed by respective walls of the frame members, the outer side wall (17) extending between the upper wall (15) and the lower wall (16), the frame (10) further comprising a frame groove (18) in the lower wall of the frame, and at least two lifting brackets (30), where each lifting bracket comprises a first leg portion (31) adapted for abutting the frame of the window and a second leg portion (32) extending in an angle of more than 90 degrees to the first leg portion (31), the second leg portion (32) comprising at least one element (33) adapted for attachment of lifting gear (50), and the first leg portion (31) comprising a central leg section (34) forming a connection to the second leg portion and two opposite outer leg sections (35), where each of the outer leg sections comprise a clamping element (37) adapted for engagement with an edge (19) of the frame (10) extending opposite the outer side wall (17) at the upper side wall (15), a locking element (38) adapted for locking the clamping element and a hook member (39) adapted for engagement with the frame groove (18).
