Abstract (en)  
Disclosed is a vertical air conditioner, comprising an air conditioner body (2), and further comprising a base (1) detachably fitted with the air conditioner body (2), wherein the base (1) comprises a base body (11), which base body (11) has a fitting part (1121), a body air inlet (1141) and a body air outlet (1151) are formed on the base body (11), a cavity is formed in the base body (11), and a fan (122) and an air handling module (13) are formed in the cavity. The base (1) in the vertical air conditioner can be detachably fitted with the air conditioner body (2), and the base (1) itself forms a separate air supply system, and the air handling module (13) is used to handle air based on the air supply system. Therefore, after the base (1) and the air conditioner body (2) are fitted together, the additional air handling function achieved by the base (1) is independent from the air conditioner body (2), which does not affect the original structure of the air conditioner body (2), and can run independently rather than relying on the operation of the original air conditioner body (2).
