Abstract (en)

[origin: WO2016042431A2] Braking device (10) for a vehicle such as, for example, a walking frame, a stroller or a disabled wheelchair, comprising: a hand grip (2) extending along an extension axis X-X adapted to be rotatably mounted on a handlebar of a vehicle; a slide (3) operatively connected to the cable (5) of a vehicle brake; said slide (3) being translatable between a locked position tensioning said cable (5) of a brake and an unlocked position leaving loose the cable (5) of a brake, and vice versa; at least one pin element (4) integral with said hand grip (2) and engaged with a profile (7) of said slide (3); said pin element (4) sliding with respect to said profile between a first position, in which said slide (3) is in the unlocked position, and a second position, in which said slide is in the locked position, and vice versa.
