Abstract (en)

[origin: WO2016043601A1] An adherence monitor for a dry medicament dispenser having a rotatable base. The monitor has an opening including internal resilient projections, so that the base can be received and retained in the opening, and the base can be rotated by rotating the monitor. Also disclosed is a cap detection sensor for use with a monitor or in the dispenser, including a lever extending generally parallel to the axis of rotation of the base, the lever at one end extending past the base towards the cap, and extending into the dispenser or monitor so as to engage a switch, the arrangement being such that the lever is engaged by the cap as it is attached, and thereby enables the switch.
