Abstract (en)

[origin: WO2016041760A1] The invention relates to a method for deicing brake actuators (1) on a rail vehicle, said brake actuators (1) being movable from a rest position (2) in which the brake actuators (1) are disengaged into a braking position in which an engagement force (FS) is applied to the brake actuators (1). In order to deice the brake actuators (1), even during operation of the rail vehicle, the brake actuators (1) are moved from the rest position (2) into a deicing position in which a disengagement force (FO) counteracting the engagement force (FS) is applied to the brake actuators (1) in order for ice to detach therefrom.
