Abstract (en)
[origin: WO2016042213A1] The invention relates to a pyrolysis apparatus and a pyrolysis method. The pyrolysis apparatus is a continuous apparatus so that material to be pyrolysed is conveyed through the apparatus. The pyrolysis apparatus has at least two control parts, through which material to be pyrolysed is conveyed. In the at least two different control parts, the material is subjected to thermal effects of a different magnitude. In addition, gas evaporated from the material is recovered from the at least two control parts.
