Abstract (en)

[origin: WO2016041636A2] The invention relates to a draining device for a basin (12), particular in the form of a sink, comprising at least one part (24) allowing fluid to pass through and one part which blocks the flow of the fluid (26), at least one of said parts can be manually moved from one position (05) allowing the flow of fluid between the basin (12) and a discharge pipe (34) of the device to a position blocking the flow of fluid, and vice versa, by means of an actuation device (30). The invention is characterized in that the actuation device (30) comprises a tensioning device (54), said tensioning device allowing the discharge pipe (34) to be fixed to the basin (12) in a fluid-tight manner. The invention also relates to a basin comprising said type of draining device
