Abstract (en)
[origin: WO2016041624A1] The invention relates to a securing device (1') for securing a sanitary object made of ceramic, comprising a main part (5') which has a receiving channel (22), comprising an adapter element (4') with a threaded bore (10) for screwing onto a threaded rod, and comprising a holding element (23) for holding the adapter element (4') in the receiving channel (22) in a formfitting manner. The holding element (23) is arranged in the main part (5) in an adjustable manner transversely to the longitudinal axis (L). The aim the invention is to simplify the assembly of such a securing device and to make said assembly more reliable. According to the invention, this is achieved in that a latching element (31') is arranged on the main part (5), said latching element automatically engaging into an undercut element (14') of the adapter element (4').
