Abstract (en)

[origin: WO2016041847A1] The invention relates to a lock a body component of a vehicle which can be moved from an open position into a closed position, in particular for a flap or door or a vehicle, comprising a locking hook which retains a striker in the closed position of the body component and a catch locking the locking hook in the closed position, said catch can be actively moved in the closed position locking the locking hook from a pre-locking position into a fully locking position.
