Abstract (en)

[origin: WO2016041848A1] The invention relates to a lock for a vehicle component of a vehicle which can be moved from an open position into a locked position, in particular for a flap or door of a vehicle, comprising a locking hook which can move into the locking position from a pre-locking position. Said locking hook is maintained in the pre-locking position by a catch, said catch preventing a movement of the locking hook into the fully locking position.
