Abstract (en)

[origin: CN107004208A] A media management system includes a content analysis unit that analyzes the information on the media output to identify the data structure of the information and compares the information structure to known information structures; a template analysis unit that reformats the information to a similar file structure if the structure of the information is substantially similar to a known information structure, creates a new information structure based on the structure of the file information if the structure of the information is not substantially similar to a known information structure; and a media production unit that generates a media product based on the structured information.
