Abstract (en)
[origin: WO2016016876A1] The system disclosed in this application results from the need of transactions processing in which they are authorized in a secure way. The system comprises a multiservices platform (1), an application (2) with which the user (9) interacts, an accession system (3), a merchant system (4), at least one communication channel with external entities (5), a communications manager (6), a security manager (7) and a key identifiers manager (8). Its applicability is, for example, transverse to all business sectors who perform sales in physical or virtual stores, and therefore require a connection to a transaction processing system in a secure way and with authentication insurance.
