Abstract (en)

The present invention relates to a method for constructing a thermally insulating water-tight roof cover (1) wherein panels (3) which comprise a slab (6) of thermally insulating material are placed on a roof deck (2) next to one another with seams (16) between said panels (3), wherein a self-adhesive sealing tape (17) is applied over said seams (16) and adhered along said seams (16) onto said panels (3) and wherein a finishing coating layer (15) is applied onto said sealing tape (17) and at least along said sealing tape (17) onto said panels (3). Since the roof cover (1) is already rendered water-tight by the sealing tape (17), it does not need to be covered when rainy weather is expected and the roof cover (1) is not entirely finished yet.
